IN-LINE DIS-INFECTION SYSTEMS

Berson UV-techniek is an ultraviolet (UV) manufacturing company based in Nuenen, the Netherlands and has been established since 1972.

Berson develops and manufactures disinfection systems for fluids and surfaces, based on advanced ultraviolet (UV) light technology. Applications are found in various industries: food, soft drinks, drinking-water, hospitals, pharmacy, cosmetics, electronics, chemical industry and for coolant and process-water, waste-water purification and contamination control in brine baths and fish farms.

Berson is dedicated to providing the highest possible standards of service from pre-sales, customer specific bespoke design through to production and customer support. We are certified to internationally recognised Quality Management Systems such as ISO 9001-2008.

Berson UV has a worldwide distribution network to meet the need for ultraviolet technology. Sales and service are provided by factory trained technicians who ensure that the highest standards of service are provided locally.
