BESPOKE PROCESS EQUIPMENTS

Chem has been established by a team of highly qualified technical professionals, design engineers and management specialists with core expertise and decades of experience.

Chem Process Systems designs and manufactures pressure vessel, heat exchanger, surface condensers, steam jet ejectors and vacuum systems, multiple effect evaporation plant, crystallizers, salt recovery plants, etc. based on vacuum evaporation, crystallization and heat transfer technologies.

The company has been in business for past 10 years, having serviced well over 1000 customers with over 4500 standard and special equipments supplied to date. The Chem manufacturing facility rolls out equipment manufactured to the highest applicable standards and to the world most exacting codes including but not limited to ASME, HEI, TEMA and ANSI.

Chem continuously upgrades its engineering shop and as a result has separate bays for light and heavy engineering process. The company is ISO 9000 approved by DNV. Quality systems are in place, maintained and audited as per norms.
